

## Rules and Video Presentation Guidelines (SIC 2026)

1. The competition welcomes entries from both individual innovators and teams. Each team must officially designate one (1) Team Leader or Principal Researcher from among its members. **Each entry may consist of a maximum of five (5) participants, including the Team Leader or Principal Researcher.** The Organizing Committee reserves the absolute right to reject any competition entry it deems inappropriate or unsuitable for the event.
2. To successfully complete registration and enter the competition, participants must submit the following three items:
  - ✓ **Online Entry Form:** Completed with all required project details.
  - ✓ **Video Presentation:** A pre-recorded video showcasing the innovation, strictly adhering to the duration limits.
  - ✓ **Proof of Payment:** A valid receipt or confirmation of the registration fee.
3. Evaluation is conducted by an official panel of judges. **The judge's decision is final**, and absolutely no disputes, correspondence, or appeals will be entertained.
4. Video Presentation Guidelines:
  - a. The video must have a **maximum duration of 3 minutes**. Videos exceeding this limit will be penalized.
  - b. Style: The presentation must be brief, clear, and concise.
  - c. The video presentation must be divided into three fundamental segments:
    - i. **Introduction** (10% – 15% of total time). State the project title, core objectives, and a brief outline of the project. This is the most critical part for setting the tone. Your primary goal is to hook the audience and capture their attention within the first 15 seconds.
    - ii. **The contents** (around 75% of total time). This is the core of your presentation. Your outline should strategically address the following points in sequence:
      - The problem: Define the exact issue or pain point your target users are currently facing.
      - Current shortcomings: Explain why existing market solutions fall short or fail to solve this problem adequately.

- The potential solution: Introduce the conceptual framework of a new solution.
  - Your product: Formally present your specific project/product and how it works.
  - User benefits: Detail the practical advantages and value that users will gain from your innovation.
  - Market value & opportunity: Provide data regarding the market size and the commercial opportunity available.
  - Evidence & social proof: Share relevant experiences, real-world examples, production/implementation costs, and social proof.
  - IP & research: Highlight the product's Intellectual Property status (patents/copyrights) and any published academic papers related to it.
- iii. **Conclusion** (around 10% of total time): Deliver the "X-Factor" of your project. Remind the audience of your absolute key takeaways and reinforce your core message. End the presentation on an inspiring, positive note, leaving the judges feeling that their time watching your video was thoroughly well spent.

***Great innovations deserve to be seen. Good luck!***
